

WHY IS SECURITY SO IMPORTANT TO US?

Because it's important to you.

INNIO's Digital Solutions: myPlant cybersecurity policies to keep your operations secure

INNIO gives your industrial assets a digital life with Jenbacher myPlant Performance – our Asset Performance Management solution. Now you can take your engine data with you wherever you go, knowing that our strong protective cybersecurity policies will help keep your operations secure throughout your Jenbacher engines' lifetime.

What is transferred to Jenbacher's myPlant Performance? Only the essential data is transferred.

- To give you the insights you need on your industrial assets' operation, we transfer operational data from control systems (such as voltages and engine state) and notification data (such as messages, warnings and alarms).
- Personal data is not transferred; however, your name and email are required to create the myPlant user account that allows access to your engine data.

Is my data protected? Yes, your data is protected.

- All transferred data is fully encrypted and protected. It is transmitted end-to-end through the Internet-standard HTTPS protocol, which provides encryption via Transport Layer Security* (TLS).
- Jenbacher security experts maintain and operate the security infrastructure with strict software standards and technologies that are implemented and enforced across the entire system.
- A cloud-based Web Application Firewall (WAF) continuously protects your data against common web-based attacks.
- Access to the myPlant Performance system is strictly controlled and managed by selected technical support personnel or administrators.

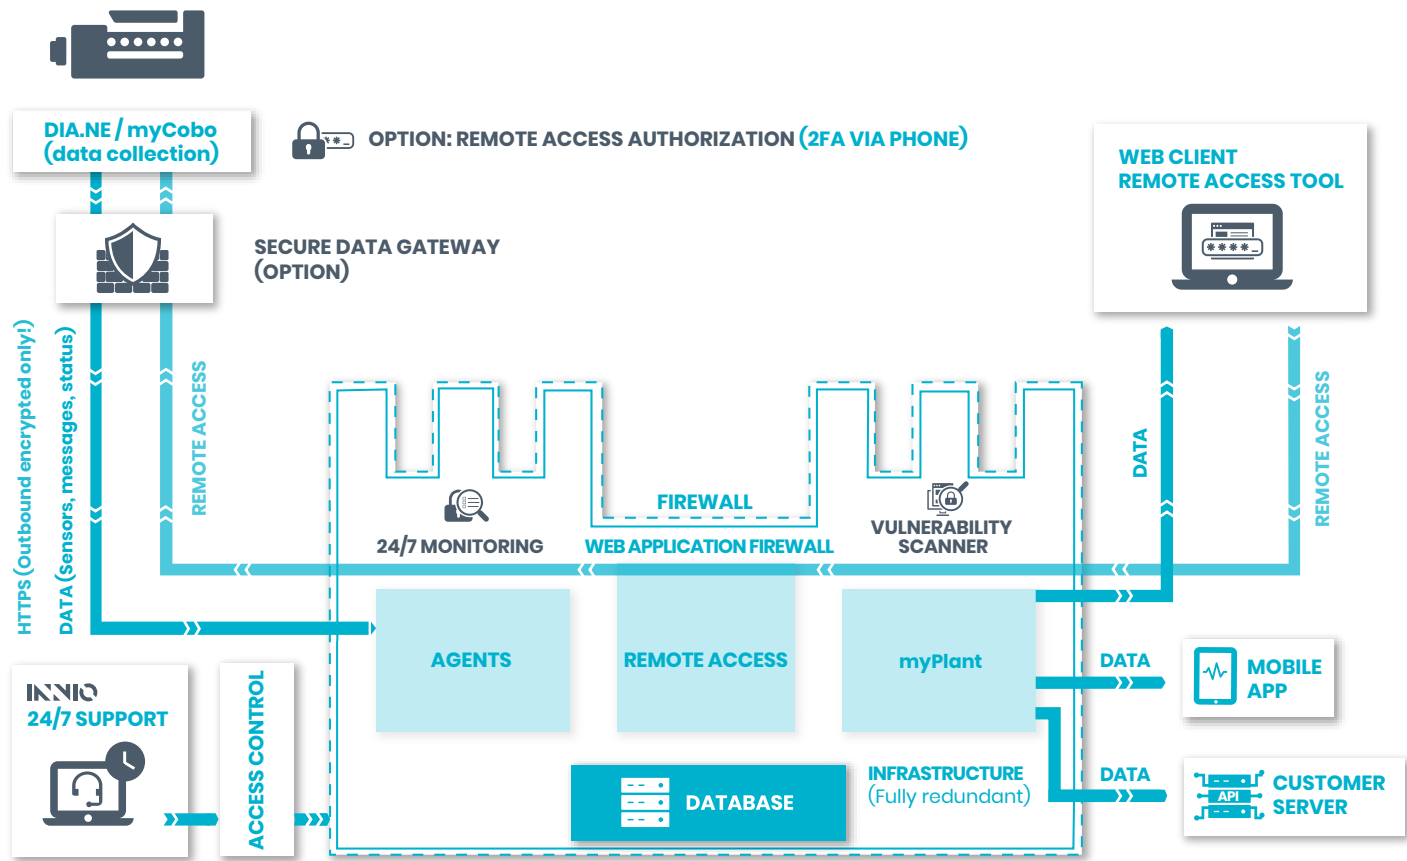

Is access to my Jenbacher engine control system protected? We protect access with multiple security measures.

- Additional credentials with independent restrictions are required when the DIANE control system is accessed remotely.
- We track any remote access activity to protect your control system from unauthorized access.
- Our hosting infrastructure setup allows customers to restrict connections to a minimum and implement state-of-the-art traffic controls.
- For even more protection against unauthorized access, we offer an optional two-factor authorization process. This means that any remote access attempt must be approved by onsite personnel before a connection can be established.

Our comprehensive security model

How we have built the security architecture to protect your data

INNIO is a leading energy solution and service provider that empowers industries and communities to make sustainable energy work today. With our product brands Jenbacher and Waukesha and our digital platform myPlant, we offer innovative solutions for the power generation and compression segments that help industries and communities generate and manage energy sustainably while navigating the fast-changing landscape of traditional and green energy sources. INNIO is individual in scope, but global in scale. With our flexible, scalable, and resilient energy solutions and services, we enable our customers to manage the energy transition along the energy value chain wherever they are in their transition journey.

INNIO is headquartered in Jenbach (Austria), with other primary operations in Waukesha (Wisconsin, U.S.) and Welland (Ontario, Canada). A team of more than 4,000 experts provides life-cycle support to the more than 55,000 delivered engines globally through a service network in more than 100 countries.

INNIO's improved ESG Risk Rating again secures the number one position across more than 500 companies globally in the machinery industry assessed by Sustainalytics.
